STEP	TEST STEP/INPUT	EXPECTED RESULTS	ACTUAL RESULTS	PASS/FAIL
59.	Open the "LinkedIn" app.	The "LinkedIn" app will open. No user will be registered.	 The "LinkedIn" opened. A message of "Welcome back" and "Continue as Nicole" button appear.	FAIL
60.	Click on "Continue as Nicole".	The created user will be open.	The created user opened.	PASS

Title: "Join LinkedIn".

Description: There's no error notification when signing up with an e-mail that already exists in a registered user.

Steps to reproduce:

1. Open the "LinkedIn" application on a mobile device.
2. Below the "Sign In" title, click on "Join LinkedIn".
3. Enter a registered user e-mail (nicoledur8@gmail.com) in the "E-mail" field, and click "**Agree & Join**".
4. Enter the password of the registered user (N*****1***!) in the "Password" field, and click "**Agree & Join**".
5. Enter the first name (Nicole) and last name (Durlacher) of the registered user, in the "First Name" and "Last Name" fields, and click "**Continue**".
6. Run the "security check" that pops up until any message/ error message of the application appears.

Expected result:

An error message will appear, in the third step that the email is already registered.

Actual result:

No error message appeared, and the application kept through the registration until after the step that needs to enter first name and last name (also existing details of the registered user) are introduced, without an error message that the details already exist.

Notes:

After clicking "**Continue**" in the step of the first and last name, the application tests the user that was trying to sign up with already registered details, until the application automatically opens the existing user with a message "*It seems you already had an account, we've logged you in*". It would be easier to an alert from the beginning that the e-mail already is registered.

Severity: Between low & medium.

Priority: Waiting for the supervisor to advise.

Pictures:

Title: Uninstall "LinkedIn".

Description: When running the sanity test, install/uninstall, not all the data, as expected, is erased from the iPhone device.

Steps to reproduce:

1. Navigate to the page where the "LinkedIn" application is on the iPhone device.
2. Click long on the "LinkedIn" app, then click "Remove App".
3. After the "LinkedIn" application is deleted, open "App Store".
4. Search for "LinkedIn".
5. Download the "LinkedIn" application, again.
6. Close the "App Store", and navigate to the page where the "LinkedIn" application is.
7. Open the "LinkedIn" application.

Expected result:

The "LinkedIn" application will open on the Sign in/Join LinkedIn page, no user will be registered.

Actual result:

The "LinkedIn" application opened. A message of "**Welcome back**" and "**Continue as Nicole**" button appear.

Notes:

The basis of the sanity test, Install/Uninstall, in the moment an application is deleted from a mobile device, all the data, and users that were registered, are erased.

The "LinkedIn" application was removed from the device. When it was re-installed, the application used the data of the user, created before, which certainly was not deleted, despite that the application was deleted.

Severity: Low.

Priority: Waiting for the supervisor to advise.

Pictures:
